Indian Financial Statements Studio - User Guide (version 3.7)

This guide is written in simple words. Read the chapters in order the first time. The same text is inside the software, in the tab **User Guide**.

Contents

- 1. Read this first
- 2. Words you will meet
- 3. A small story: Sita Stores
- 4. Opening the software and saving
- 5. Step 1: Add the business (Entities)
- 6. Step 2: Add the financial year
- 7. Step 3: The list of ledgers (Chart of Accounts)
- 8. Step 4: Opening balances
- 9. Step 5: Writing the year's transactions (Voucher Entry)
- 10. Looking at what you wrote (Day Book and Ledger Account)
- 11. Bringing data from Tally (Tally Import)
- 12. Bringing a trial balance from Excel or CSV
- 13. The Trial Balance screen
- 14. The year-end corrections (Journal Adjustments, Depreciation, Closing stock)
- 15. Tax (Taxes)
- 16. The statements (Balance Sheet and Profit and Loss)
- 17. Seeing and changing the schedules (Schedules)
- 18. Trading Account and Manufacturing Account
- 19. Partnership firms and LLPs (Appropriation Account)
- 20. Cash Flow, Fund Flow, Notes, Ratios
- 21. Provisional, Estimated and Projected accounts
- 22. Making the final report (Reports, Report Settings)
- 23. Alerts and error codes
- 24. The Audit Log
- 25. Backup, restore and moving to another computer
- 26. Year-end checklist and the next year
- 27. If something goes wrong
- 28. What this software does not do

1. Read this first

This software helps you make the yearly accounts of a business: the Balance Sheet, the Profit and Loss, the Cash Flow and more. You can use it on a computer or a phone. It works in your browser (Chrome or Edge is best). It does not need the internet to work, and your figures stay on your own device.

The big idea in five lines

- Every rupee that comes in or goes out is written down. We call each written line an **entry**.
- Entries are kept on pages. Each page is for one thing, such as Cash, Rent, or one customer. We call a page a **ledger**.
- At the end of the year we add up every page. The list of all the totals is the **Trial Balance**.
- From the Trial Balance the software makes the **Balance Sheet** (what the business owns and owes) and the **Profit and Loss** (what it earned and spent).
- You check the figures, then you press a button and get a PDF or Excel file to sign and give.

> **Tip:** You do not need to know accounting theory to start. Follow the chapters in order. Chapter 3 shows one small shop from the first day to the last report, with real numbers. Do the same on your own screen the first time.

Three rules that save you from trouble

- **Save often.** Press the gold **Save** button, or press Ctrl+S. The software also saves by itself a moment after every change.
- **Take a backup every week.** Press **Download backup now** in Backup and Storage. A backup is a file you keep safely, for example in your email or a pen drive. If your browser data is ever cleared, this file brings everything back.
- **Never force a figure.** If something does not balance, the software shows a difference and an alert. Find the reason. Do not add a made-up figure to make it match.

2. Words you will meet

Here are the words in simple language. Come back to this page whenever a word is new.

Word	What it means	Think of it like
Entity	The business or person whose accounts you are making. A shop, a company, a firm.	The name on the cover of the notebook.
Financial year	The 12 months the accounts cover. In India it is usually 1 April to 31 March.	One school year.
Ledger	A page for one thing: Cash, Bank, Rent, Sales, Ram Stores (a customer).	One page in a notebook.
Chart of accounts	The list of all your ledgers.	The index of the notebook.
Debit (Dr) and Credit (Cr)	The two sides of every entry. Every entry has equal amounts on both sides.	The two pans of a balance scale.
Voucher	The paper or screen where you write one transaction: a sale, a payment, a receipt.	One receipt book slip.
Opening balance	What a ledger had on the first day of the year.	The money in your pocket when the day starts.
Trial Balance	The list of every ledger with its balance. Total debits must equal total credits.	The marks list of all subjects added up.
Journal adjustment	An entry made at the year end for things not yet written, like closing stock and depreciation.	Correcting the notebook before the exam.
Closing stock	The goods lying unsold on the last day of the year.	The toys left on the shelf at closing time.
Depreciation	The part of the cost of a machine, vehicle or furniture that is used up this year.	A new bicycle is worth less every year.
Balance Sheet	A photograph of what the business owns and owes on the last day.	A photo, not a film.
Profit and Loss	A film of the year: earnings less expenses.	The report card for the year.
Schedule or note	A page that shows what is inside one line of a statement.	Opening the lid of a box to see what is in it.
Alert	A message that something needs your attention. Each has a code like FS-E101.	A warning light on a scooter.

3. A small story: Sita Stores

Sita runs a small shop. She will make her accounts for the year 1 April 2026 to 31 March 2027. We will use her as the example in every chapter, so you can see how the screens fill up. The numbers are small on purpose.

What Sita had on 1 April 2026

Ledger	Debit ₹	Credit ₹
Cash	10,000	
Bank	90,000	
Stock of goods	60,000	
Sita's Capital		1,60,000
Total	1,60,000	1,60,000

The two totals are equal. That is the first sign that the figures are right.

What happened in the year

- She sold goods for ₹2,00,000 and the money came into the bank.
- She bought goods for ₹1,20,000 and paid from the bank.
- She paid shop rent ₹12,000 and salary ₹30,000 from the bank.
- She put in ₹20,000 more of her own money into the bank.
- She took ₹5,000 from the cash box and put it into the bank.
- At the end she counted the unsold goods: ₹75,000.

What the software will show at the end

Item	₹
Sales	2,00,000
Opening stock + purchases − closing stock (60,000 + 1,20,000 − 75,000)	1,05,000
Gross profit	95,000
Rent and salary	42,000
Net profit	53,000
Bank at the end (90,000 + 2,00,000 − 1,20,000 − 42,000 + 20,000 + 5,000)	1,53,000
Cash at the end	5,000
Capital at the end (1,60,000 + 20,000 + 53,000)	2,33,000
Assets: bank + cash + stock	2,33,000

> **Tip:** Capital 2,33,000 equals assets 2,33,000. The Balance Sheet balances. If you follow chapters 4 to 12 with these numbers you will get the same result.

4. Opening the software and saving

1. Find the file **Financial_Statements_Studio** (it ends with .html). Double-click it. It opens in your browser. Use Chrome or Edge for the best result.
2. You see the header with the gold **Save** button and a row of tabs. The tabs are the screens. Click a tab to go to that screen.
3. The first time, the software may ask where to save a copy of your data. In Chrome or Edge choose **Choose save location** in Backup and Storage and pick a folder. After that, every save also updates that file.
4. If your browser cannot do that, nothing is lost. The data is kept inside the browser, and you use **Download backup now** to keep a copy.

> **Careful:** Do not use a private or incognito window. The browser may throw away everything when you close it. The software shows the alert FS-E809 if it cannot save.

> **Tip:** The gold Save button sits at the top and also floats at the bottom right of the screen. It tells you the time of the last save.

5. Step 1: Add the business (Entities)

1. Click the tab **Entities**, then **Add entity**.
2. Type the name. Choose the type: Proprietorship, Partnership Firm, LLP, Private Limited Company, and so on. The type decides the format of the reports and which extra screens you get.
3. Tick the **business activity**: Trading (buying and selling goods), Manufacturing, Services, and so on. You must tick at least one. Trading gives you the Trading Account. Manufacturing gives you the Manufacturing Account.
4. Tick which extra accounts you need: Provisional, Estimated, Projected. Tick only what you will really use. Others stay hidden.
5. Fill the PAN, address and other details if you have them. Press **Save entity**.

> **Example:** Sita Stores: type Proprietorship, owner name Sita, activity Trading. Provisional, Estimated, Projected not ticked.

You can add many entities. Use the Entity box under the tabs to switch between them.

6. Step 2: Add the financial year

1. Click **Financial Years**.
2. Type the start date and the end date, for example 2026-04-01 and 2027-03-31. Press **Add year**.
3. Choose the year in the **Financial year** box under the tabs. Every screen works on the entity and the year you chose there.

> **Tip:** When a year is finished and signed, press **Close year**. A closed year cannot be changed by mistake. You can **Reopen** it if needed.

For the next year, just add the next year. The closing balances of this year will become the opening balances of the next year by themselves (chapter 8).

7. Step 3: The list of ledgers (Chart of Accounts)

A ledger is a page for one thing. The software can load a ready list for your type of business. You can add, change or remove ledgers.

1. Click **Chart of Accounts**. Press **Load default chart**. Many common ledgers appear: Cash, Bank, Sales, Purchases, Rent, Salaries and so on.
2. For a trading business also press **Add missing template ledgers**. This adds Sales Returns, Carriage Inwards and similar ledgers.
3. To add your own ledger press **Add ledger**. Give it a name. The software suggests where it goes in the statements. Press **Use suggestion** if it looks right.
4. Every ledger must be told **where it belongs** in the Balance Sheet or the Profit and Loss. This is called the statement line. If a ledger has a balance but no statement line, the software tells you and leaves it out until you fix it. It never hides it silently.

Two small tick-boxes that matter

- **Direct expense:** tick it for costs that belong to making or buying the goods, such as carriage inwards or factory wages. These go in the Trading Account.
- **Fixed asset ledger:** tick it for machines, vehicles, furniture. These are used in Depreciation.

> **Example:** Sita Stores: she uses Cash, Bank, Stock, Capital, Sales, Purchases, Rent, Salaries. All come in the default chart.

> **Careful:** Do not delete a ledger that has figures or vouchers. The software will stop you.

8. Step 4: Opening balances

Opening balances are what each ledger had on the first day of the year.

If this is the second year or later

You do nothing. The closing balances of the last year, including closing stock and the profit of the last year, become the opening balances of this year automatically. The software checks this all the time. If you change last year after this year was started, an alert (FS-E104) tells you and offers to bring the opening balances up to date.

If this is the first year in the software

1. Click **Trial Balance**.
2. In the column **Opening** type the balance of each ledger and choose Dr or Cr.
3. Check the box at the top: opening debits must equal opening credits.

You can also bring opening balances from Tally (chapter 12) or from a CSV file (chapter 13).

> **Example:** Sita Stores: Cash 10,000 Dr; Bank 90,000 Dr; Stock 60,000 Dr; Sita's Capital 1,60,000 Cr.

> **Careful:** Enter or import the opening figures before you start entering vouchers.

9. Step 5: Writing the year's transactions (Voucher Entry)

A voucher is one transaction. Click **Voucher Entry**. At the top choose the kind of voucher:

Voucher	Use it when	Example
Receipt	Money comes in.	Sita puts ₹20,000 into the bank.
Payment	Money goes out.	Rent ₹12,000 and salary ₹30,000 paid from the bank.

Voucher	Use it when	Example
Contra	Money moves between cash and bank.	₹5,000 from the cash box to the bank.
Sales	You sell goods or services.	Goods sold for ₹2,00,000.
Purchase	You buy goods or services.	Goods bought for ₹1,20,000.
Credit Note	A customer returns goods or you reduce a sale.	A customer returns goods.
Debit Note	You return goods to a supplier.	You send goods back.
Journal Voucher	Anything else, with debit and credit lines you choose yourself.	Moving an amount from one ledger to another.

How to fill a voucher

1. Choose the type. The voucher number is given by the software (for example SV-0001).
2. Choose the **date**. It must be inside the financial year.
3. Choose the **main account**: for a Receipt it is the bank or cash that received the money; for a Sales voucher it is the customer or the bank that gets debited.
4. In the lines, choose each ledger and type the amount. Press **Add line** for more lines. For a Journal Voucher type the amount in the Debit or the Credit column. The total of debits must equal the total of credits.
5. Write a short **narration**, for example "Sold goods to Ram Stores".
6. Press **Save voucher** (or Ctrl+Enter). The voucher is saved and added to the Trial Balance at once.

> **Example:** Sita: Sales voucher, main account = Bank, line = Sales ₹2,00,000. Purchase voucher, main = Bank, line = Purchases ₹1,20,000. Payment voucher, main = Bank, lines = Rent 12,000 and Salaries 30,000. Receipt voucher, main = Bank, line = Sita's Capital 20,000. Contra voucher, from Cash to Bank 5,000.

If you made a mistake

- Find the voucher in the list below the form. Press **Edit**, change it and save. The old entry is undone and the new one is made. The audit log keeps both.
- Or press **Cancel** and give a reason. A cancelled voucher stays in the list with a line through it. Vouchers are never deleted, so there is always a trail.

If something is wrong, the software tells you in plain words with a code. FS-E611 means a Journal Voucher does not balance. FS-E612 means the date is outside the year. FS-E613 means something is missing in the voucher.

> **Tip:** You can type the amounts with commas, like 2,00,000. Press Tab to move to the next box.

10. Looking at what you wrote (Day Book and Ledger Account)

Day Book

Click **Day Book**. It lists every voucher in date order. Pick a period or a type. Tick **Show ledger lines** to see the debit and credit lines. Press PDF, Excel or CSV to take it out.

Ledger Account

Click **Ledger Account** and choose a ledger. You see its opening balance, each voucher, and the balance after each one, and the closing balance at the end. Click a voucher number to open that voucher.

> **Example:** Sita's Bank ledger: opening 90,000 Dr, then +2,00,000 (sales), −1,20,000 (purchases), −42,000 (rent and salary), +20,000 (capital), +5,000 (contra). Closing 1,53,000 Dr.

> **Tip:** The Ledger Account also shows a line "Movements entered directly in the Trial Balance" if you typed a figure there. This helps you see which part came from vouchers.

11. Bringing data from Tally (Tally Import)

If you keep your books in Tally, you do not need to type them again. You export a file from Tally and bring it here.

In Tally

1. Open the company. Open the **Day Book** or the **Ledgers** list.
2. Press the **Export** button (Alt+E). Choose the format **XML (Data Interchange)**. Choose the period of this financial year. Save the file.
3. Do it once for the masters (ledgers with opening balances) and once for the vouchers if Tally gives them as separate files.

The menu names are a little different in Tally ERP 9 and TallyPrime, but the idea is the same: Export, XML.

In this software

1. Choose the entity and the financial year first. They must match the period in the Tally file.
2. Click **Tally Import**. Press **Choose Tally XML file** and pick the file.
3. Read the summary. It shows how many ledgers are new, how many vouchers will be imported, and how many were left out and why.
4. Look at the four tick-boxes. Keep them ticked unless you know what you are doing: create missing ledgers, use Tally opening balances, import vouchers, and the sign option. The sign option is for the rare file where debit amounts are positive.
5. Open **How the new ledgers will be classified**. The software guesses where each ledger belongs from its Tally group (for example Sundry Debtors becomes Trade receivables). A few may stay unclassified.
6. Press **Import into** the year. A result box tells you what was done and whether the Trial Balance balances.
7. Then go to **Chart of Accounts** and check the new ledgers (alert FS-E713).

What is brought in

- Ledgers with their Tally group.
- Opening balances of balance sheet ledgers. Income and expense ledgers start the new year at nil. The profit of earlier years sits in the ledger Profit & Loss A/c.
- Vouchers dated in this year. Sales, Purchase, Receipt, Payment, Contra, Credit Note and Debit Note come in as the same kind when they have the simple shape. Others come in as Journal Vouchers with the Tally type in the narration.

What is left out, and why

- Vouchers dated outside the year, cancelled or optional vouchers, orders and delivery notes with no money in them.
- Vouchers that do not balance, or that use a ledger which was not created. You see the list (FS-E714).
- Vouchers already imported. You may import the same file twice by mistake and nothing is doubled.

> **Careful:** Check the opening balances. If total debits and credits differ, you see FS-E715. Try the sign option, or export the masters again with all ledgers.

> **Tip:** Tally is not touched. This software only reads the file you give it.

12. Bringing a trial balance from Excel or CSV

1. Make a sheet with a row for each ledger and the columns **Ledger** (or **Particulars**, as Tally calls it) and any of **Opening**, **Debit**, **Credit**. Write Dr or Cr after an opening amount, or use a minus sign for credit.
2. Click **Trial Balance**, then **Import CSV**. Paste the text or choose the file. Press **Preview**.
3. Read how many rows matched. Tick **Create these as new ledgers** if some names are new. Press **Apply import**.

Vouchers you already entered in this year stay. The import replaces the figures typed in the Trial Balance and keeps the voucher amounts on top.

> **Careful:** Names must match. "HDFC Bank" and "HDFC Bank A/c" are different ledgers to the software.

13. The Trial Balance screen

Click **Trial Balance**. Each row is a ledger. The columns are Opening, Debit, Credit and Closing. The box at the top shows three checks: opening debits equal opening credits, the year's debits equal credits, and closing debits equal closing credits.

- If a check shows a difference, find the ledger or amount that causes it. Do not force it.
- Figures that come from vouchers are already inside the Debit and Credit columns. Change them in Voucher Entry.
- **Carry forward** brings last year's closing into this year's opening (it is done automatically in later years).
- **Clear year** removes the figures of the year. It also removes the vouchers of the year and asks you first.

14. The year-end corrections (Journal Adjustments, Depreciation, Closing stock)

At the end of the year some things are not yet written: the goods lying unsold, the wear of machines, bills not yet paid. These are written as **journal adjustments**. They are kept apart from the daily books, so you can always see what you changed at the end.

Closing stock

1. Count the unsold goods and value them at cost or at the price you could sell them for, whichever is lower.

2. Click **Trading and P&L Account**. In the box **Closing stock** type the value. Choose the stock ledger and the Changes in inventories ledger. Press **Post closing stock journal**.

> **Example:** Sita: closing stock ₹75,000. The stock ledger goes from 60,000 to 75,000 and the profit goes up by 15,000.

If you made a mistake press **Remove the stock journal** and post again. Next year the opening stock will be this closing stock.

Depreciation

1. Click **Fixed Assets** and add each machine, vehicle or piece of furniture with its cost and date.
2. Click **Depreciation**. The software works out the year's depreciation by the method you chose. Check it, then press the button to post the depreciation journal.

Other adjustments

Click **Journal Adjustments** to write any other correction, such as outstanding rent or prepaid insurance. A journal must balance: total debit equals total credit. Save it as a draft while you are thinking, and post it when sure. Draft journals are reminded to you in the Dashboard.

15. Tax (Taxes)

Click **Taxes** to see the tax for the year. The software uses the rates and slabs stored in it for the type of business. Check them. Rates change every year. The result goes into the statements as the tax expense when you post it. It is a working tool, not tax advice. Your tax adviser must finish the return.

> **Tip:** Income tax rules are in the **Compliance Rules Library** with a note of how well each rule was checked. A rule marked not verified (alert FS-E501) needs your check against the law.

16. The statements (Balance Sheet and Profit and Loss)

Click **Balance Sheet** or **Profit and Loss**. They are made from the Trial Balance and the journals. Nothing is typed here.

- At the top you see small green tick marks for the checks: assets equal capital plus liabilities, every ledger is placed, equity movement agrees.
- **Include posted journals** and **Show previous year** are tick-boxes. The previous year appears if you have that year's figures.
- **Statement layout** lets you choose **Vertical** (one column going down, the usual form) or **T-form** (two sides: capital and liabilities on the left, assets on the right; expenses on the left, income on the right). Both show the same figures. A company should use the vertical form for official statements.
- The numbers in brackets next to a line, like (Note 3), point to the schedule behind it.

> **Example:** Sita: Balance Sheet — Capital 2,33,000 on one side; Bank 1,53,000, Cash 5,000, Stock 75,000 on the other. Total 2,33,000 both sides.

> **Careful:** If a ledger is not placed in a statement line, you see a red message with its name. Go to Chart of Accounts and place it. The statement is not forced to balance.

17. Seeing and changing the schedules (Schedules)

A schedule is the list of ledgers inside one line of a statement. For example the line "Cash and cash equivalents" has the ledgers Cash and Bank inside it. Click **Schedules** to see them all. Click the name of a schedule to open it.

1. You see each ledger with its amount from the books, and a box with the schedule figure.
2. To change a figure, type a new amount in the box and press Tab. The row shows the difference.
3. The software shows the warning **FS-E711 Schedule figure changed** and writes what you changed in the audit log. The Balance Sheet and Profit and Loss do not change. Only the schedule changes.
4. You may type a reason. It is printed under the schedule.
5. To go back, press **Reset** on a row or **Reset all changes**.

> **Careful:** A changed schedule no longer agrees with the statement. Use this only when you must, for example to show a different grouping. If the books are wrong, correct the ledger or make a journal instead.

The Notes to Accounts, and the PDF and Excel files, show the changed figure with a star and the warning line. Press PDF, Excel or CSV on the Schedules screen to take out the break-up.

18. Trading Account and Manufacturing Account

Trading and Profit and Loss Account (for traders)

Click **Trading and P&L Account**. The first part is the Trading Account. It shows opening stock, purchases and direct expenses on one side, and sales and closing stock on the other. The difference is the **gross profit**. The second part is the Profit and Loss Account. It starts from gross profit and takes away the other expenses to get the **net profit**. The net profit must be the same as in the Profit and Loss statement. If not, you see FS-E405. Choose **Account format** (two sides) or **Vertical format**.

> **Example:** Sita: sales 2,00,000 + closing stock 75,000 − opening stock 60,000 − purchases 1,20,000 = gross profit 95,000. Less rent and salary 42,000 = net profit 53,000.

If the closing stock is not entered, you see FS-E404. The gross profit would be wrong without it.

Manufacturing Account (for factories)

Tick Manufacturing for the entity. Click **Manufacturing Account**. First tell the software, for each stock ledger, whether it holds **Raw materials**, **Work-in-progress** or **Finished goods**. The software guesses from the name; you can change it. Tick **Direct expense** on factory wages, power and similar ledgers.

- The Manufacturing Account finds the cost of production = opening raw materials + purchases + factory expenses − closing raw materials + opening work-in-progress − closing work-in-progress.
- The Trading Account that follows uses that cost of production and the finished goods stock.
- If the result differs from the Trading and P&L Account, you see FS-E716. Check the stock types and the opening stock.

19. Partnership firms and LLPs (Appropriation Account)

In a firm the profit is shared among the partners. The **Profit and Loss Appropriation Account** shows how. Click **P&L Appropriation**.

1. **Add partner** for each partner. Type the name and the profit share in per cent. The shares must add up to 100. Tick **Working partner** if the partnership deed allows a salary.
2. For the year type for each partner: opening capital (or press **Take opening capital from last year's closing**), capital put in during the year and for how

many months it stayed (12 means the whole year), drawings, salary or remuneration, and interest on drawings if any.
3. Type the interest rate on capital from your deed (12 is the usual limit for tax). The software works out the interest. You can type a different base per partner if needed.
4. Read the Appropriation Account. It starts from the net profit, takes away interest on capital, salary and any transfer to reserve, and divides the rest by the shares.
5. Read **Partners' capital accounts**. Each partner has: opening, plus capital put in, plus interest, plus salary, plus share of profit, less drawings. The total must equal the capital in the Balance Sheet.

> **Careful:** Also write the drawings, interest and salary in the ledgers (for example in the partners' capital ledger). If the two totals differ you see FS-E406. If your books already charge interest or salary as an expense, leave them at zero here (FS-E408).

The software also tells you if interest is above 12 per cent a year, or the salary is more than the tax limit, or is paid to a partner who is not working (FS-E409). This is a tax hint only. The account follows your deed.

20. Cash Flow, Fund Flow, Notes, Ratios

- **Cash Flow** shows where cash came from and where it went: operating, investing and financing. It is made from ledger movements. Every ledger must have a cash flow class. The screen tells you which do not.
- **Fund Flow** is a management view of sources and uses of funds. It is not a legal statement.
- **Notes to Accounts** are the notes behind the statements. Type your policies, share capital details, contingent liabilities, related parties, ageing and dues to small enterprises here. The ledger-wise lines come from the books.
- **Financial Ratios** show each ratio with its formula and the figures used. If a ratio changes by more than 25 per cent you are asked to explain.

21. Provisional, Estimated and Projected accounts

These three are made **after** the current year statements are ready. They are shown only if you ticked them for the entity (or tick them on the Dashboard).

Account	What it is for	What you give
Provisional	The year has ended but the books are not final.	The cut-off, and estimates of what is not yet booked.

Account	What it is for	What you give
Estimated	The year is running. Actual figures up to a date, and guesses for the rest.	The cut-off date and monthly guesses.
Projected	Future years.	Your assumptions: growth, costs, loans, tax.

Each is clearly labelled on every page, so nobody mistakes it for the final accounts. If the current year statements are not ready, a banner says FS-E109.

22. Making the final report (Reports, Report Settings)

1. Click **Report Settings**. Add your logo (optional), the people who sign (name, designation, membership or DIN number), the place and the date of signing.
2. Click **Compliance Configuration**. Answer the questions about the entity. The software shows which accounting standards and which checklist apply. Confirm them. Rules marked not verified need your own check.
3. Click **Reports**. Choose the report type and press **Validate**. Read the findings and fix what is red.
4. Press **Preview**. Look at every page.
5. Press **Save snapshot**. A saved report never changes, even if you change the books later. Then press PDF, Excel or CSV.

> **Tip:** Every report page has the entity name, the year, a footer with the date and the words "Not audited or certified", and the signature block. Sign the printed PDF.

> **Careful:** The software helps you prepare. It does not audit or certify. A professional must review before statutory use.

23. Alerts and error codes

The software watches your work and shows a yellow bar when something needs attention. Press **See details and fixes**. Each alert has a code that starts with FS-, a plain explanation, the usual reason and what to do. The same list is in the tab **Help and Error Codes**, where you can search it.

Colour or word	Meaning
Error	Something is wrong and the figures cannot be trusted until you fix it. For example the Trial Balance does not balance (FS-E101).
Warning	Something looks wrong or is not finished. Check it.

Colour or word	Meaning
Info	For your knowledge.

> **Tip:** Codes never change. If a helper tells you "FS-E104", you can search that code and find the same text.

24. The Audit Log

Click **Audit Log**. It is the diary of the software. Every important change is written with the date, the time and who did it. For figures changed in the Trial Balance, in a voucher or in a schedule it also writes the old and the new value.

1. Type your name once at the top. It is written against every change after that.
2. Use the date boxes and the search box to find an entry. Tick or untick **This entity only**.
3. Press **Export CSV** to give a copy to an auditor.

Each entry is locked to the one before it with a check number. If someone changes or removes an entry in the backup file, the software says **FS-E812**. This guards against accidents and casual changes. It is not a legal seal.

25. Backup, restore and moving to another computer

1. Click **Backup and Storage**. Press **Download backup now**. A file is saved. Keep it in two places.
2. To move to another computer or to recover, open the software there, go to Backup and Storage and choose the backup file to restore. The software checks the file before it replaces anything and also saves a copy of what was there before.
3. In Chrome or Edge, choose a **save location** so that every change also goes into a file you control.

> **Careful:** The software reminds you if your last backup is old. Please listen to it.

Delete all data from this browser removes everything. Download a backup first.

26. Year-end checklist and the next year

- All vouchers are entered. Day Book looks complete.
- Trial Balance balances (all three checks).
- Closing stock posted. Depreciation posted. Other adjustments posted.

- No red alerts. Every yellow alert is understood.
- Balance Sheet balances. Net profit in the Trading and P&L Account equals the Profit and Loss.
- Partners' accounts agree to the Balance Sheet (firms and LLPs).
- Notes and ratio explanations are written.
- A backup has been downloaded.
- The report is validated, previewed, saved as a snapshot and exported. The year is closed.

For the next year add the new financial year. The openings come automatically. Check the banner "Opening balances agree to the previous year" on the Trial Balance. Then start with Voucher Entry again.

27. If something goes wrong

Problem	What to do
The Trial Balance does not balance (FS-E101).	Look at the difference. Look for a ledger typed on the wrong side, a missing ledger, or a voucher not saved. Do not force it.
The Balance Sheet does not balance (FS-E102).	Usually a ledger is not placed in a statement line (FS-E103), or the Trial Balance does not balance. Fix those first.
A ledger is missing from the statements.	Chart of Accounts: give the ledger a statement line.
I cannot save a voucher.	Read the message under the form. The date may be outside the year, a line may be empty, or the debit and credit of a Journal Voucher differ.
I typed a wrong amount in a voucher.	Edit the voucher in the list and save, or cancel it and write a new one.
Opening balances look wrong.	Check the previous year first. Then read FS-E104. Press the button to bring openings up to date.
The Tally import skipped vouchers.	Read the list (FS-E714). Tick Create missing ledgers and import again. Vouchers outside the year are left out on purpose.
Nothing is saved after I close the browser.	Do not use a private window. Press Save. Download a backup. Choose a save location in Chrome or Edge.
The schedule is different from the statement.	Someone changed a schedule figure (FS-E711). Press Reset in Schedules, or find out why it was changed.
The Audit Log says the checksum does not agree (FS-E812).	Restore the last good backup. If the change was by you, note the reason.

28. What this software does not do

- It does not file returns or send anything to the government.
- It does not audit or certify. A professional must review.
- Banks, insurance companies and bodies with their own format are not covered.
- The Balance Sheet format for companies follows Schedule III. For firms and other non-company entities it uses a vertical, current and non-current layout with last year's figures. The ICAI guidance notes and the LLP Form 8 are not built in line by line. Check them before official use.
- Stock valuation is yours to do. The software does not count or value stock.
- The partner interest uses simple interest by months. It does not work day by day.
- Several people cannot use one file at the same time, and there is no approval step by a second person.
- Tally import reads Tally XML files. It does not connect to a running Tally.
- Foreign currency consolidation and part-year group changes are not handled.

The full, technical list is in the file Manual_and_Limitations.
