ESIC Monthly Contribution Creator

Release notes and user guide

Version 1.0.0 | Released 24 October 2026 | Techmin HR Solutions, a subsidiary of Techmin Wealth Partners

1. Purpose

ESIC Monthly Contribution Creator helps an employer prepare the monthly ESIC contribution data for review. It calculates the employee and employer shares for every insured person, checks each row, and produces an Excel file arranged like the common ESIC monthly contribution file structure. Your work is saved, so it is still there the next time you open the tool.

- Prepare the monthly ESIC contribution sheet quickly from a simple input template.
- See the employee share (0.75 per cent) and employer share (3.25 per cent) for each person and in total, rounded upward to the next rupee.
- Apply the Rs. 176 average daily wage exemption for the employee share, with a warning to confirm the prescribed calculation.
- Catch wrong IP numbers, missing names, wrong days and wages, and wrong status or last working day combinations before filing.
- Keep the rows, wage month and establishment name saved, with a backup you can download and restore.

2. Who it is for

- Employers and establishment managers who file their own monthly ESIC contribution.
- Payroll, accounts and HR teams who prepare the monthly file for one or several establishments.
- Compliance consultants who want a quick, transparent check of a client's data before filing.

3. What is in Version 1.0.0

Area	Feature
Input	Import the ComplyPro ESIC template (sheet ESI Data) as .xlsx, .xls or .csv, or add employees one by one. Numbers stored as text, with commas or the rupee sign, or in scientific notation, are cleaned up on import.
Template	A downloadable blank input template with an Instructions sheet listing the status codes.
Live totals	Total gross wages, total employee share and total employer share, updated as you type.
Contribution	Employee share 0.75 per cent and employer share 3.25 per cent of wages, each rounded upward. Average daily wages are shown for each person.
Rs. 176 exemption	Employee share is nil where average daily wages (gross wages divided by payable days) are Rs. 176 or less. The employer share remains payable.
Validation	IP number of exactly 10 digits, duplicate IP numbers, missing name, payable days and wages, wages with nil days, last working day rules by status, Out of Coverage month check, wages above Rs. 21,000.
Status codes	All 14 employee statuses with their ESIC reason codes. Last working day is accepted only for the statuses and conditions that allow it.
Excel output	An .xlsx file with the six columns of the monthly contribution file structure: IP number, name, days, total monthly wages, reason code for zero working days and last working day.

Area	Feature
PDF report	A professional A4 landscape PDF with the Techmin logo, wage period, establishment, summary cards, a row-wise table with repeating headings on every page, totals, notes, sign-off lines and page numbers. It is built inside the tool, so it looks the same on every device. IP numbers and names follow the on-screen masking setting.
Saved work	Work is kept in the browser. In Chrome or Edge it can be saved automatically to a file you choose the first time. Backup can be downloaded, copied, uploaded or pasted.
Data tab	Saved-data summary, Excel and CSV export of the rows with the calculated shares, backup and restore, backup text that fills in automatically, change of save location and clearing of saved data.
Privacy on screen	Imported IP numbers and names are masked on screen by default (for example 12******90 and R*** K***). A tick box shows the full values and allows editing. Sample rows and rows you type yourself are shown in full.
Clear uploaded data	One button clears all rows. Clear saved data on the Data tab clears everything, including the wage month and establishment name.
Look and feel	Techmin HR Solutions branding, light and dark themes, works on phones and computers. The row table scrolls inside its own box, with the headings kept in view.

4. How to use the tool

1. Open the tool. On the first visit it asks where your data should be saved. In Chrome or Edge on a computer, choose a dedicated file; the tool then saves to it automatically. Otherwise choose Not now and use Download backup regularly.
2. Create ESIC file tab, step 1: select the wage month, and enter the establishment name if you wish. The name is only for your own reference.
3. Download the blank input template, fill the ESI Data sheet with one row per insured person, and import it. You can also add employees one by one, or load the sample rows to see how the tool works.
4. Review the rows. Check the payable days, gross wages and employee status. For a person with nil days and nil wages, choose the status and enter the last working day if the status requires one.
5. Click Validate entries. Correct every error. Read each warning and decide whether it applies.
6. Check the live totals and the contribution for each person.
7. Download the ESIC contribution file (.xlsx). Check it against the current file format and instructions on the ESIC employer portal before uploading.
8. Download report (PDF) for a formatted copy for your records and for sign-off. Tick Show full IP numbers and names first if you want them printed in full.
9. Data tab: download a backup after major changes. When the month is finished, use Clear uploaded data before starting the next month.

5. How the figures are worked out

- Employer share: 3.25 per cent of gross wages, rounded upward to the next rupee. The total is calculated on total wages, then rounded upward.
- Employee share: 0.75 per cent of gross wages, rounded upward to the next rupee, for each person.
- Average daily wages: gross wages divided by payable days. If this is Rs. 176 or less, the employee share is nil. The employer share is still payable.
- A person with nil payable days has no average daily wage. The tool still calculates the shares on any wages shown.
- Output: payable days are rounded up to a whole number. The reason code is written only when days are nil. The last working day is written only when days are nil and the status requires it.
- The tool estimates average daily wages from the gross wages and payable days you enter. Confirm the prescribed calculation and the wages and days that count for each person before filing.

6. Saving, backup and privacy

- Everything runs in your browser. Your data is not sent to any server by this tool.
- In Chrome or Edge on a computer, choose a save location the first time. The tool then writes to that file automatically and loads it again next time. The browser may ask once to renew permission.
- Other browsers keep the data in browser storage only. Use Download backup and Upload backup.
- Backup and save files contain IP numbers and names. Keep them in a secure folder and do not share them.
- The backup text box on the Data tab shows the full backup, including IP numbers and names, because it is meant to be copied. Do not leave it open on a shared screen.
- Clearing browser data, or using a private window, removes the browser copy. The chosen save file and your downloaded backups are not affected.

7. Known limits

- This is an independent utility and not an ESIC product or portal. The file layout and instructions must be checked on the ESIC employer portal before every filing.
- Coverage rules, the wage ceiling, contribution periods, arrears and newly covered employees are not modelled beyond the warning for wages above Rs. 21,000.
- Masking hides IP numbers and names on the screen only. The Excel file, exports, backups and saved data contain the full values.
- Browsers without the File System Access API cannot save to a chosen file.

8. Version history

Version	Date	Notes
1.0.0	24 October 2026	First release: contribution calculation with the Rs. 176 exemption, validation, Excel output, print review, saved work with chosen save location, backup and restore with automatic backup text, Excel and CSV export, masked imported data, clear uploaded data, release notes and disclaimer.

9. Disclaimer
